SECTION ONE

OPERATION
SAFETY NOTICES

The following safety instructions apply to all game operators and service personnel. Specific warnings and cautions will be found throughout this manual where they apply. We recommend that you read this page before preparing your game for play.

⚠️ CAUTION

HANDLING ELECTRONIC DEVICES: This product uses complex electronic components that are SENSITIVE to static electricity. The following precautions must be observed and followed prior to handling any of the electronics that make up this game.
1) Discharge any static electricity build up in your body by touching the safety ground stud of the power supply chassis. This is to be done PRIOR to touching or handling the electronic assemblies.
2) Store the electronic assemblies in an anti-static area. Anti-static bags are to be used to store the CPU assembly.
3) DO NOT remove or connect any electronic assemblies when the cabinet power is turned on. Doing so will damage the electronic assemblies and void the warranty.

TRANSPORTING GAME: This game contains fragile electronic devices. Do not move this game with power turned on. Transport this game securely. Avoid rough handling.

ISOLATION TRANSFORMER: This video game system does not utilize an isolation transformer. No isolation exists between the cabinet AC system and the external AC line.

PROPERLY GROUND THE GAME: To avoid electrical shocks, do not plug in the game until it has been inspected and properly grounded. MIDWAY games should only be plugged into a grounded 3-wire outlet.

DISCONNECT POWER DURING REPAIRS: To avoid electrical shock, disconnect the game from the AC power source before removing or repairing any part of the game.

USE THE PROPER FUSE: To avoid electrical shock, the replacement fuse must match the original fuse in fuse type, voltage rating, and current rating.

DANGER OF EXPLOSION IF BATTERY IS INCORRECTLY REPLACED. Replace only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer’s instructions.

HANDLE FLUORESCENT TUBE AND CRT WITH CARE. If you drop a fluorescent tube or CRT and it breaks, it will implode! Shattered glass can fly eight feet or more from the implosion.

---

EPILEPSY WARNING

A very small portion of the population has a condition which may cause them to experience epileptic seizures or have momentary loss of consciousness when viewing certain kinds of flashing lights or patterns that are present in our daily environment. These persons may experience seizures while watching some kinds of television pictures or playing certain video games. People who have not had any previous seizures may nonetheless have an undetected epileptic condition.

If you or anyone in your family has experienced symptoms linked to an epileptic condition (e.g. seizures or loss of awareness), immediately consult your physician before using any video games.

We recommend that parents observe their children while they play video games. If you or your child experience the following symptoms: dizziness, altered vision, eye or muscle twitching, involuntary movements, loss of awareness, disorientation, or convulsions, DISCONTINUE USE IMMEDIATELY and consult your physician.
ATTENTION

PROPERLY ATTACH ALL CONNECTORS. Be sure that the connectors on each printed circuit board (PCB) are properly connected. If they do not slip on easily, do not force them. A reversed connector may damage your game and void the warranty. All connectors are keyed to fit specific pins on each board.

SETUP PROCEDURE

Game Location Requirements

<td>Width 27&quot; - Depth 41&quot; - Height 73&quot;</td>
<td>Approx. 335 Lbs</td>
</tr>
</tbody>
</table>

INSTALLATION & INSPECTION

1. Remove all items from the shipping containers and set them aside. Inspect the exterior of the cabinet and the control panel for any damage.

2. The coin door keys are attached to one of the joysticks. Unlock and open the coin door and the cash box door. Remove the spare parts stored in the cash box.

3. The rear door keys are located on a key hook inside the cabinet, to the left of the coin door. Remove the screws holding the rear door then unlock and remove the door. Inspect the cabinet interior for any signs of damage. Check all major assemblies to assure that they are mounted securely.

4. Refer to the Cabinet Wiring Diagram (Section 3), and check to see that all cable connectors are correctly secured. Do not force connectors. Watch for damaged connectors and avoid making reversed connections.

5. Unscrew the Monitor Controls board from the inside left wall of the cabinet. Stick it onto the Velcro strip located on a wood beam under the front of the monitor.

6. To secure the rear door with a padlock, remove the two nuts from inside the cabinet, above the rear door opening, leave the bolts in place. Remove the hasp from the spare parts bag. Slide the hasp on the bolts so that it protrudes from the hole in back of the cabinet. Replace the nuts.

Remove the two nuts and bolts from the back of the rear door, holding the lock plate in place. Turn the lock around so that the slot in the plate is below the door. Reinstall the two nuts and bolts.

7. Next, locate the four leg levelers among the spare parts in the cash box. There are four threaded holes on the bottom of the cabinet, one in each corner. Place one leg leveler (with its hex nut) in each of the threaded holes. Lower each leg leveler until the cabinet is stable and level.

WARNING!!
The cabinet is top heavy.
8. To attach the line cord, remove the four Phillips-head screws that mount the line cord cover plate to the rear of the cabinet. Match the prongs on the plug with the holes in the receptacle and push the line cord securely into place. Be sure the cord aligns with the indentation of the plate, (indentation should point toward the bottom of the cabinet). Remount the line cord cover plate.

9. Replace the rear door and fasten securely to the cabinet using the four HWH screws. Lock the rear door and remove the key.

IF TAMPER RESISTANT REAR DOOR SCREWS ARE DESIRED, tamper resistant screws and matching wrench is provided with the game. The tamper resistant screws and wrench are located in the spare parts bag. Replace the HWH screws with the tamper resistant screws and tighten the screws with the T20 Torx wrench provided.

10. Move the cabinet to the desired area. Be sure it is level. Verify that the AC line voltage matches the game requirements. Plug the game into a grounded (3-terminal) AC wall outlet. Switch ON the game, using the ON/OFF switch located on the upper left rear of the cabinet. The game should begin the Start-up tests and then enter the Attract mode.
CABINET ASSEMBLY

Front View

Rear View

1-5
SERVICING

♦ Removal of the Marquee
Switch off power to the game. Remove the hex-head screws from the black marquee retaining strip located on top of the header. Remove the strip and carefully lift the marquee and the marquee glass from the top of the header. Store the marquee carefully to prevent damage.

♦ Removal of the Fluorescent Light Assembly
Switch off power to the game. Remove the marquee glass and the marquee. The fluorescent bulb is now accessible for replacement. Remove the plastic lamp locks. Grasp the bulb, give it a quarter turn, and remove it from its socket. Carefully, place a new bulb into the socket, and turn to reinstall.

To remove the entire light fixture, disconnect the fluorescent light assembly from its power cable. Remove the screws that hold the assembly to the cabinet then lift out the assembly.

WARNING!!
If you drop a fluorescent tube and it breaks, it will implode! Use care in handling.

♦ Removal of the Speakers
Switch off power to the game. Remove the marquee and the marquee glass. The speakers come out from the front of the cabinet. Be sure to disconnect the cabling and remove the nuts on the mounting screws before attempting to remove the speakers from the enclosure. Carefully, reinstall the seals upon completing any task in the speaker enclosure.

♦ Servicing the Control Panel
Switch off power to the game and open the coin door. The control panel is held in place by two latches (located inside the cabinet) which provide constant pressure on the strikes. To release the latches, reach through the coin door opening toward the right and left sides of the cabinet. Lift the latch handle and unhook the wire fasteners. Grip the joysticks and carefully tilt the control panel back on its hinge.

To return the control panel to its normal position, carefully lean it forward until it rests on the cabinet. Be careful not to let the control panel slam down onto the cabinet, or to pinch any wires. Always re-clasp the latches.

♦ Removal of the Viewing Glass
Switch off power to the game and open the control panel. Loosen the three Phillips head screws and slide the black metal strip from the bottom of the viewing glass. Carefully slide the glass from the side grooves and lift it clear of the cabinet.

♦ Removal of the Monitor Bezel
Switch off power to the game. Open the control panel and remove the viewing glass. Lift the bezel off of the monitor.
Monitor Replacement
We recommend that you read the SAFETY NOTICES section thoroughly before beginning this procedure.

Switch off power to the game. Remove the viewing glass and the monitor bezel. Completely disconnect the monitor from all of its cabling. Remove the four flange nuts securing the monitor's mounting flanges to its mounting panel. Pull the monitor carefully from the cabinet.

CAUTION

The monitor does not require an isolation transformer. However, when servicing the monitor on a test bench, YOU MUST ISOLATE THE MONITOR FROM LINE VOLTAGE WITH AN ISOLATION TRANSFORMER.

THE MONITOR IS HEAVY. BE SURE IT IS FIRMLY SUPPORTED IF IT MUST BE REMOVED FROM THE CABINET.

Volume Control, Begin Test Switch, and Service Credit Switch
Open the coin door. The game's volume control and diagnostic push-button switches are located on a small bracket on the coin door. The two center buttons controls the volume. Press the Volume Up or the Volume Down button until the desired sound level is reached. The Begin Test switch, on the right, activates the game's menu system. The Service Credit switch, on the left, allows credits to be allotted for service testing without affecting the game's bookkeeping total.

CONTROL SWITCH LOCATIONS
GAME FEATURES

STARTING UP
Switch on the power and the game begins the Start-up tests. Several colors scroll across the screen, after which the System test begins and a "tone", indicating that the sound circuits are operating, plays. After the Start-up tests have been successfully completed, the game enters the Attract mode.

Insert the desired amount of coins, bills or tokens. Select which player receives the credit by pressing the appropriate Start button. Use the joysticks to select an on-screen character, and any control panel button to confirm your choice. Game play starts automatically once the on-screen characters are chosen.

NOTE
When an error is detected during the Start-up tests, game start-up does not progress, and an error message appears on the screen.

PLAYER CONTROLS

♦ Start Button
Each player has a Start button. The Start buttons allow one or two players to begin or continue play.

♦ Joysticks
Each player has a joystick, which he uses to control an on-screen character. The player can make the on-screen character move, jump or duck.

♦ High Kick/High Punch Buttons
These buttons allow the on-screen character to kick or punch an opponent in the upper body.

♦ Low Kick/Low Punch Buttons
These buttons allow the on-screen character to kick or punch an opponent in the lower body.

♦ Block Buttons
These buttons allow the on-screen character to block an opponent's punch, kick, or special move.

♦ Run Buttons
These buttons speed up the on-screen character.

NOTE
Use joystick and button combinations to discover secret moves.

Control Panel
GAME OPERATION
The MORTAL KOMBAT 4 Control switches are located on a bracket, inside the coin door.

CONTROL SWITCHES

- **Slam Tilt Switch**
  The Slam Tilt switch prevents pounding for free games. The coin switches are ignored for five seconds after the Slam Tilt switch is closed.

- **Volume Down/Volume Up Buttons**
  The Volume Down and Volume Up push-button switches increase or decrease the volume level of the music and speech. The volume level can be adjusted during the Attract Mode or during menu system operation. For greater profits, set your game’s volume level at a nice loud setting.

- **Begin Test Button**
  The Begin Test push-button switch enters the game’s menu system. Press the Begin Test switch to access any of the menu system functions.

- **Service Credit Button**
  The Service Credit push-button switch is a special feature switch that allots credit without affecting the game’s bookkeeping total.

---

Control Panel Switch Locations
MENU SYSTEM OPERATION

OPERATION
All of the game audits, adjustments, and diagnostics are options of the Main Menu. Each option, in turn has its own menu that lists several choices that you may act upon as desired.

Press the Begin Test switch on the coin door to open the Main Menu (shown below). Game adjustments, bookkeeping and diagnostics are all accessible from this menu.

Use either joystick to move the cursor up and down the menu screen. Notice that the options are highlighted in sequence. Press any button on the control panel to open a highlighted option.

NOTE
Only highlighted options can be opened.

Return to Main Menu

MAIN MENU SCREEN

To exit the Main Menu and return to the Attract mode, use either joystick to select EXIT TO GAME OVER and press any button.
**DIAGNOSTIC TESTS**

Use either joystick to select the Diagnostic Menu and any button to open it. Then, use either joystick to move the cursor up and down the menu and any button to open a highlighted option.

To exit the Diagnostic Menu, use either joystick to select RETURN TO MAIN MENU and press any button.

---

**Switch Test**

The Switch Test allows the operator to test the switches on the control panel and in the coin door.

Use either joystick to highlight the Switch Test and any button to begin the test.

During the Switch Test the top of the screen shows the control panel switches while the bottom of the screen shows the coin door switches. Press a control panel or coin door switch and the switch location on the screen lights. Release the switch and the screen reverts to normal.

To exit the Switch Test, press both Start buttons together.

---

**Press Both Start Buttons to Exit**
**DIP Switch Test**

The DIP Switch Test allows the operator to check or change the position of the DIP Switches on the CPU Board.

Use either joystick to select the DIP Switch Test. Press any button to access the DIP Switch Setting Tables. The screen displays the current settings. To change a setting, slide the switch to the desired position. Check the screen to verify the new setting. In some cases, setting a function to OFF actually enables the function. For example, setting DIP Switch Coinage to Off enables DIP Switch Coinage.

Press any button to return to the Diagnostic Menu.

* Indicates factory setting.
**System Test**
The System Test allows the operator to monitor the functions of the CPU board. Select this test with any joystick. Press any button to start the test.

![System Test Menu](image)

**Sound Test**
This test allows the operator to listen to some of the sounds this game is capable of producing.

Use either joystick to select the test, then press any button to open the menu. The screen displays two test options. Use either joystick to select an option and any button to begin the test.

![Sound Test Menu](image)

Once the test is completed, select RETURN TO DIAGNOSTIC MENU and press any button.
Monitor Patterns
The Monitor Patterns Test provides a menu for testing the monitor.

Select the test with either joystick. Press any button to open the test menu. Once the menu is open, use either joystick to select an option, and any button to begin it. Press any button again to return to the Monitor Patterns Menu. If any of the tests show a need for adjustment, use the proper knobs on the Monitor Controls board. The Monitor Controls board is located just inside the control panel opening, beneath the monitor.

The RED, GREEN and BLUE SCREEN tests fill the screen with red, green or blue. Press any button to return to the Monitor Patterns Menu.

The COLOR BARS test fills the screen with 31 shades of colors to help with red, green and blue level adjustments. Each color should appear sharp and clear. Press any button to return to the Monitor Patterns Menu.

The GRAY SCALE fills the screen with several shades of gray. Each shade should appear sharp and clear. Press any button to return to the Monitors Patterns Menu.

The SIZING PATTERNS test fills the screen with a grid and a series of dots. The grid and the dots should be clear. The dots should be round. Press any button to return to the Monitor Patterns Menu.

To exit this test, use either joystick to select RETURN TO DIAGNOSTIC MENU, and then press any button.
**Burn-in Test**
The Burn-in Test will continuously exercise the appropriate sections of the game CPU.

Use any joystick to select the test, then press any action button to activate it. When the Burn-in Test detects an error, a message is displayed on the screen.

**BURN-IN TEST SCREEN**

Once the test list is completed, the game begins playing sounds while the screen scrolls through several colors. Then the game displays the monitor tests: the color bars, the color screens and the sizing patterns. After completing the monitor portion, the test returns to the list display and the sequence starts over again.

**Mechanical Counter Test**
The Coin Counter Test checks the function of the coin counters.

Use any joystick to select the test, then press any action button to activate it.

**Mechanical Coin Counter Test**

Joystick left/right selects meter. Press any button to click selected meter. Hit START to exit.

| METER 1 | METER 2 | METER 3 | METER 4 |

GAME ADJUSTMENTS
The Game Adjustments allow the operator to customize the game.

Use either joystick to select the Game Adjustments Menu. Press any button to open the menu.

The Game Adjustments Menu offers several options. Each option has several choices. Use either joystick to select an option, then press any button to open the option. The next menu screen provides a setting value. Use either joystick to change the setting value and press any button to lock it in.

To exit the Adjustments Menu, use either joystick to select RETURN TO MAIN MENU, and press any button.

NOTE
Adjustment values set by DIP SWITCH, override adjustment values set by the menu system.

Custom Pricing
Custom pricing allows the operator to install pricing other than that of the Standard Pricing Table. Custom pricing also allows the operator to select the maximum amount of credits per game, the amount of credits required to start a game, and the amount of credits required to continue a game. To use Custom Pricing, the Coinage DIP Switch must be set to ON (CMOS).

<table>

**CUSTOM PRICING SCREEN**

**Left, Right, Center, and Extra Units;** Coins inserted accumulate units. This adjustment specifies the number of units given for each coin in the fourth chute (see "Units per Credit").

**Bill Validator Units;** Coins inserted accumulate units. This adjustment specifies the number of units given for each bill validated (see "Units per Credits").

**Units per Credit;** This is the number of coin units required to buy one credit.

**Units per Bonus;** There is one bonus credit awarded after this many coin units have accumulated.

**Minimum Units;** This is the minimum number of units required before any credits are given.

**Credits to Start;** Each player needs this many credits to begin a game.

**Credits to Continue;** Each player needs this many credits to continue a game.

**Maximum Credits;** This is the limit for the credit counter. Additional coins inserted will be lost (factory setting: 50).

**Coins per Bill;** Total collections are based on this many coins per bill. Set to zero to disable the total collection display.

**Show Credit Fractions;** Whether or not to show fractional credits on the credit screen.
Mechanical Counters
The “Mechanical Counters” adjustment lets the operator adjust the multiplier and counter output for each slot.

<table>

</tbody>
</table>

Sets the number of totalizer clicks for each coin through the left chute.

MECHANICAL COUNTERS SCREEN

There are five coin slots: the LEFT coin slot, the RIGHT coin slot, the CENTER coin slot, the EXTRA coin slot, and the BILL VALIDATOR.

The multiplier for each of these slots determines how many times the mechanical counter is strobed for each coin or bill through the slot.

There are two mechanical counter outputs to choose from; mechanical counter output 0 (left side) and mechanical counter output 1 (right side).

The default, most commonly used setting is referred to as the “totalizer mode”, and assigns all five slots to counter output 0.

Bill Validator
This option determines whether or not the game recognizes that a bill validator is installed. The setting choices for this adjustment are:
- No
- Yes
- Factory Setting: No

Free Play
This option selects free play. The setting choices for this adjustment are:
- On
- Off
- Factory Setting: Off
Game Difficulty
This option determines how tough the computer opponents are. The setting choices for this adjustment are:
- (1) Extra Easy
- (2) Easy
- (3) Medium
- (4) Hard
- (5) Extra Hard
- Factory Setting: Medium

Fatalities
This option determines whether or not fatalities are shown during the game. The setting choices for this adjustment are:
- Don't Show
- Show
- Factory Setting: Don't Show

Attract Mode Sounds
This option determines whether or not the game plays sounds during the Attract mode. The setting choices for this adjustment are:
- On
- Off
- Factory Setting: Off
UTILITIES

The Utilities Menu allows the operator to clear the game's bookkeeping memory.

Use any joystick to select the Utilities Menu, then press any action button. Use any joystick to select a utility. Press any action button to activate the selection.

Utilities Menu

<table>
<thead>
<tr>

*Note: Many computer grade power supplies use yellow for +12V, blue for -5V, and white for -12V. This is acceptable as long as the pinout is correct.

MORTAL KOMBAT

4

Dedicated 25” Game

SECTION FOUR

TROUBLESHOOTING

CAUTION: DO NOT REMOVE OR INSTALL ANY CONNECTOR WHEN POWER IS TURNED ON. THIS WILL DAMAGE THE CPU BOARD AND VOID THE WARRANTY.

This game uses complex electronic components that are very SENSITIVE to static electricity. The following precautions must be observed and followed prior to handling any of the game electronics.

1. Be sure that the A.C. power to the game is turned OFF prior to servicing the electronics.
2. Discharge any static electricity build up in your body by touching the safety ground stud of the power supply chassis while the line cord is connected to a properly grounded outlet. This is to be done BEFORE touching or handling the electronic assemblies.
3. Store the electronic assemblies in an anti-static area. Anti-static bags are to be used to store or transport the game CPU Board Assembly.
4. DO NOT remove or connect any electronic assemblies when the cabinet power is ON. Doing so will damage the electronic assemblies and void the warranty.
5. Always replace ground wires, shields, safety covers, etc. when maintenance or service is completed. Be sure that all ground and mounting screws are installed and tightened firmly.
1 - Game appears completely non-functional.
   A) Verify that the game power switch located on the top left rear of the game cabinet is turned on.

   B) Verify that I.E.C. line cord connector is firmly and correctly seated into I.E.C. power entry module of A.C. power chassis. If not, then gently but firmly insert the I.E.C. power cable completely into the mating receptacle of the A.C. power chassis.

   C) Check and verify A.C. line fuse of A.C. power chassis is not blown. If the fuse is blown, replace it with an identical fuse of the proper voltage and current rating. Note that a spare fuse is provided with the spare parts bag located in the cash box.

   D) Check and verify that the correct A.C. line voltage is present at the outlet.

   E) Ensure that cabinet A.C. cable 4 pin and 9-pin connectors are firmly and correctly mated with the corresponding connectors of the A.C. power chassis.

2 - Marquee lamp is non-functional.
   A) Check and verify that the fluorescent lamp is properly inserted into the lamp holders.

   B) Check and verify that the lamp pins are making good contact with the mating pins of the lamp holders.

   C) Check and verify that the proper A.C. voltage is present at the power connector of the lamp assembly. If no A.C. power is present, then check the cabinet A.C. wiring from the A.C. power chassis up to the fluorescent lamp itself.

   D) Check and verify that the starter and lamp are functional by replacing them with known working units.

   E) Check and verify that the fluorescent lamp ballast is correct for the local A.C. line voltage and frequency.

3 - Monitor appears non-functional
   A) Check and verify that the cabinet A.C. line voltage cable is firmly and properly connected to mating A.C. connector on monitor.

   B) Check and verify that the cabinet video signal cable connector is firmly and properly connected to the mating video signal input connector of the monitor.

   C) Check and verify that the monitor remote adjustment board is properly installed and connected to the monitor chassis.

   D) Verify monitor is operating correctly by replacing with a known good unit.

4 - Sound is non-functional
   A) Check and verify the cabinet wiring is correct. Ensure that the speakers are properly connected to the audio out wires from the JAMMA connector. Refer to the cabinet wiring diagram for specific wiring information.

   B) Check and verify that the power supply is providing:

<table>
<thead>
<tr>
<th>Voltage</th>
<th>Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>+5V</td>
<td>+/- 0.25V</td>
</tr>
<tr>
<td>+12V</td>
<td>+/- 0.5V</td>
</tr>
<tr>
<td>-5V</td>
<td>+/- 0.25V</td>
</tr>
</tbody>
</table>
Sound is non-functional continued...

C) Check and verify that the above listed D.C. voltages are present at the correct JAMMA connector pins. Refer to the cabinet wiring diagram for specific wiring information.

D) Check and verify that the game volume has been turned up.

E) Verify proper operation of game PCB assembly by replacing it with a known good game PCB assembly.

5 - Video game appears non-functional

A) Check and verify that the JAMMA wire harness connector is firmly and properly seated to the mating JAMMA PCB edge connector.

**CAUTION:** DO NOT REMOVE OR INSTALL JAMMA CONNECTOR WHEN POWER IS TURNED ON. DOING SO WILL DAMAGE THE GAME CPU ASSEMBLY AND VOID THE WARRANTY.

B) Check and verify that the D.C. power supply voltages at the game CPU assembly are set as follows:

<table>
<thead>
<tr>
<th>Voltage</th>
<th>Tolerance</th>
</tr>
</thead>
<tbody>
<tr>
<td>+5V</td>
<td>+/- 0.25V</td>
</tr>
<tr>
<td>+12V</td>
<td>+/- 0.5V</td>
</tr>
<tr>
<td>-5V</td>
<td>+/- 0.25V</td>
</tr>
</tbody>
</table>

The above voltages should be set when the game CPU assembly is connected and the game is powered on.

C) Check and verify that the non-JAMMA connectors (Player 3/4 connectors, extra input/output connectors, etc.) are attached at the proper location and are firmly seated.

D) Verify that the game CPU assembly completes the power on self-test sequence. Note any errors and/or failures during power on self-test. The game CPU assembly should complete the power on diagnostics without error.

E) Check and verify that the game CPU DIP Switches are set properly. See page 1-12 for DIP Switch settings.

F) Enter the detailed game CPU diagnostics by pressing the Test button during the power on self-test sequence. Check and verify the different functions of the game CPU by executing the individual CPU diagnostics.

6 - The video screen exhibits complete loss of SYNC or consistent horizontal tearing.

This game uses a LOW Resolution, 16Khz-scan rate monitor. Ensure that the monitor used is compatible with this requirement. Use of a video game MEDIUM resolution monitor will result in what appears to be horizontal tearing or complete loss of sync.

7 - The audio sounds distorted, muffled, or is missing frequencies.

A) The game uses mono sound, with a separate audio amplifier for right and left speakers. The audio outputs from the video PCB assembly is run directly from the JAMMA connector up to the separate speakers. Ensure that the cabinet wiring provides separate wiring (and not a common return) for each speaker.
The audio sounds distorted, muffled, or is missing frequencies continued...

B) The audio amplifiers are designed to drive full range speakers, and not discrete woofer and tweeter speakers. Ensure that the speakers are FULL RANGE response (100 to 10,000 Hz) and are rated at a minimum of 25 Watts.

8: The game enters the power-on diagnostics, but not normal game play.

A) Check and verify that the D.C. power supply voltages are within specification. Use the 2-Volt A.C. setting on a digital V.O.M. and verify that the supply voltages are stable and do not contain any ripple or noise.

B) Check and verify that the video CPU assembly is correct for the game.

WARNINGS & NOTICES

WARNING
USE OF NON-MIDWAY PARTS OR CIRCUIT MODIFICATIONS MAY CAUSE SERIOUS INJURY OR EQUIPMENT DAMAGE! USE ONLY MIDWAY AUTHORIZED PARTS.
* For safety and reliability, substitute parts and modifications are not recommended.
* Substitute parts or modifications may void FCC type acceptance.
* This game is protected by federal copyright, trademark and patent laws. Unauthorized modifications may be illegal under federal law. This also applies to MIDWAY logos, designs, publications and assemblies. Moreover, facsimiles of MIDWAY equipment (or any feature thereof) may be illegal under federal law, regardless of whether or not such facsimiles are manufactured with MIDWAY components.

WARNING
NOTE: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generated, uses and can radiate radio frequency energy and if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

WARNING
Prevent shock hazard and assure proper game operation. Only plug this game into a properly grounded outlet. Do not use a cheater plug to defeat the power cord's grounding pin. Do not cut off the ground pin.

NOTICE
When MIDWAY ships a game, it is in compliance with FCC regulations. Your sticker is proof. If the sticker is missing or damaged, legal repercussions to the owner or distributor of the game may result. If your game does contain a FCC sticker, call MIDWAY immediately.

NOTICE
No part of this publication may be reproduced by any mechanical, photographic, or electronic process, or in the form of a phonographic recording, nor may be transmitted, or otherwise copied for public or private use, without permission from the publisher.
